

Digital Scrapbooking Tutorials – Frame a photo in Photoshop Elements (basic & old photo style)

In this digital scrapbooking tutorial you learn how to create a basic photo frame, add a shadow and then use the eraser tool to create the look of an old photo frame in Photoshop Elements.

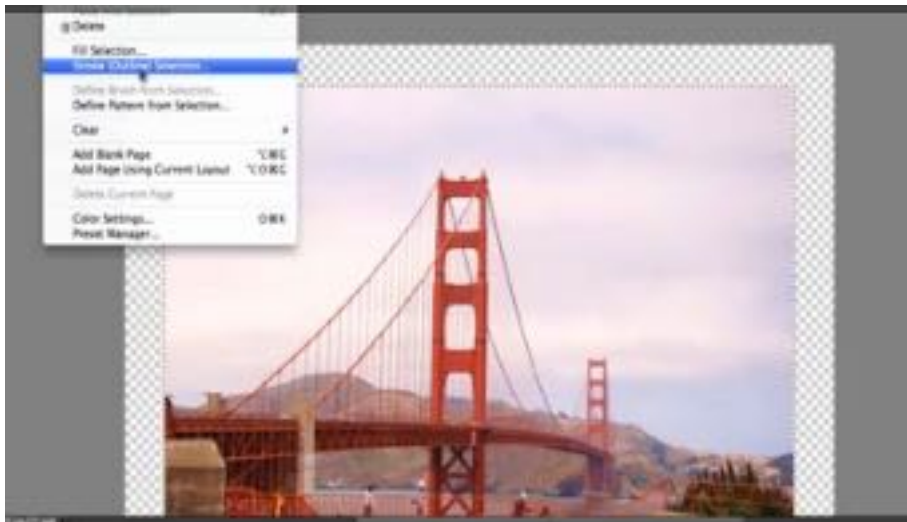

1. Open a picture of your choice in Photoshop Elements.

2. With SHIFT + T or CMD + T make your picture a bit smaller.

3. Now, select the picture and add a stroke around it.

4. Make sure the frame is big enough and not white – it needs a bit of a creamy touch to make sure that it has a vintage look later.

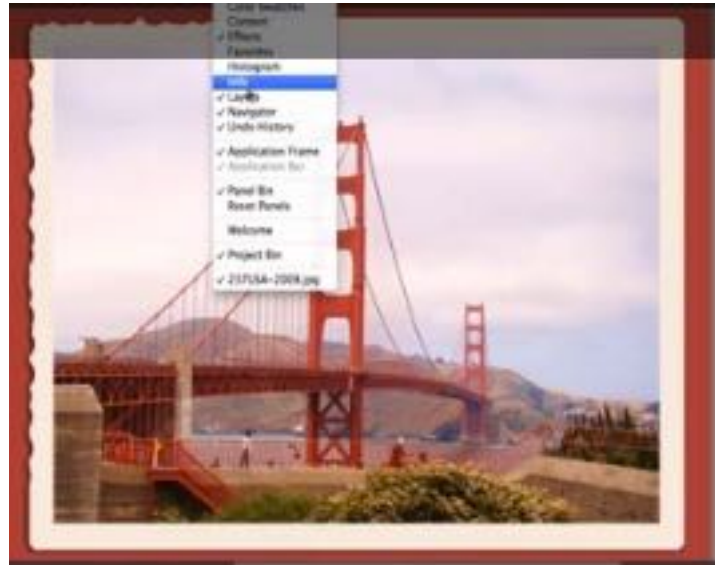

5. Now use the eraser to make small edges into the stroke.

6. Add a shadow.
