

Use the Organizer in Photoshop Elements – Digital Scrapbooking Tutorials

- Start by opening your Photoshop Elements program.
- Click on “organizer” (see pic below), another program will open which is your organizer.

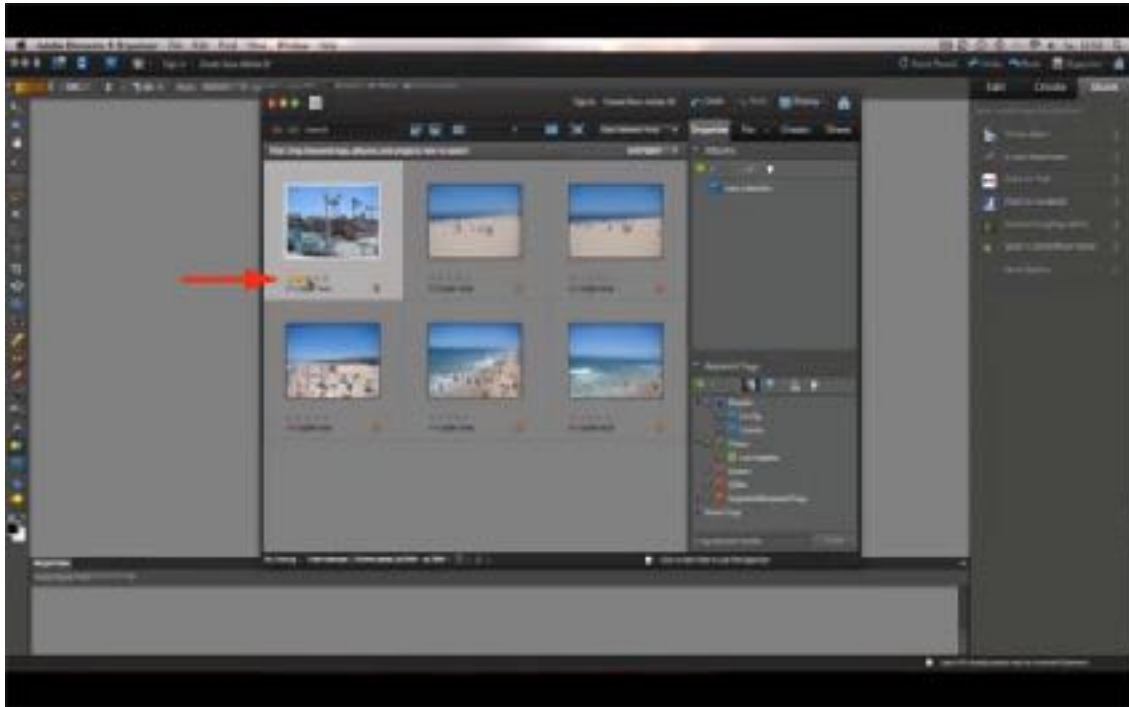

- Now import your photos.
Click on files – Get photos and videos – From files and folder (see pic below)

– One great thing about the Photoshop Elements Organizer is that you can tag your photos, so they are easier to find.

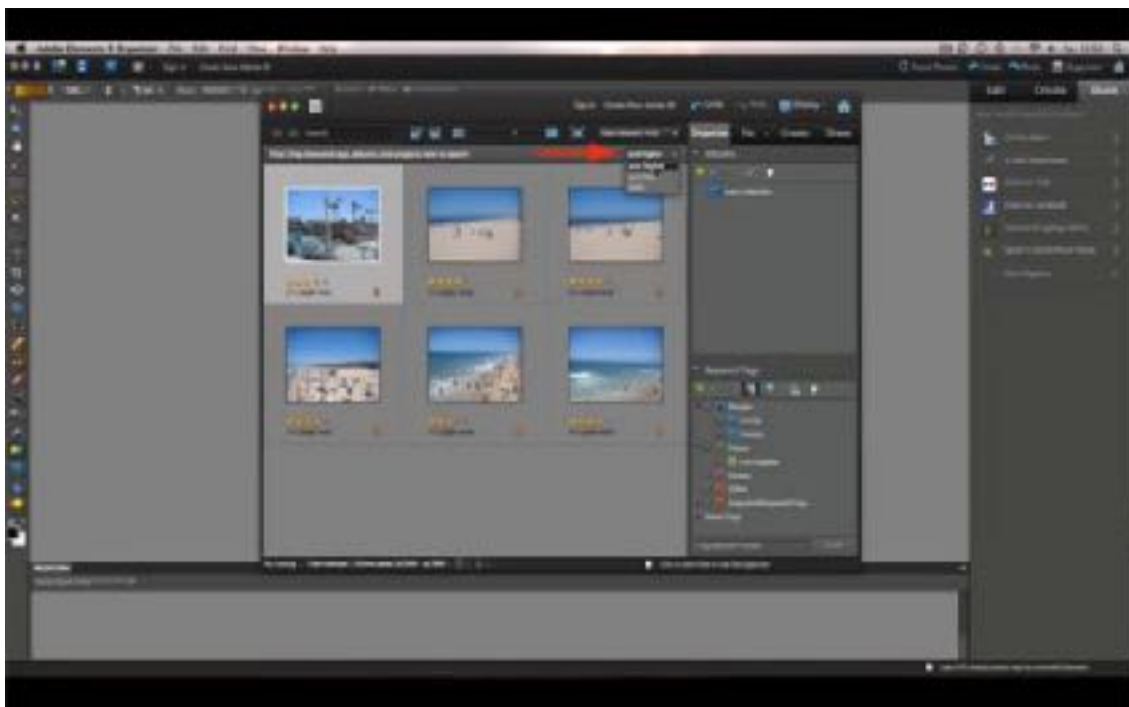

So what you do is you rate your photos by giving them stars (see pic below), after you've done that you can have just those show up that you wish to see. Like for example only those with 4 stars as in screenshot.

Here is how (see pic below)

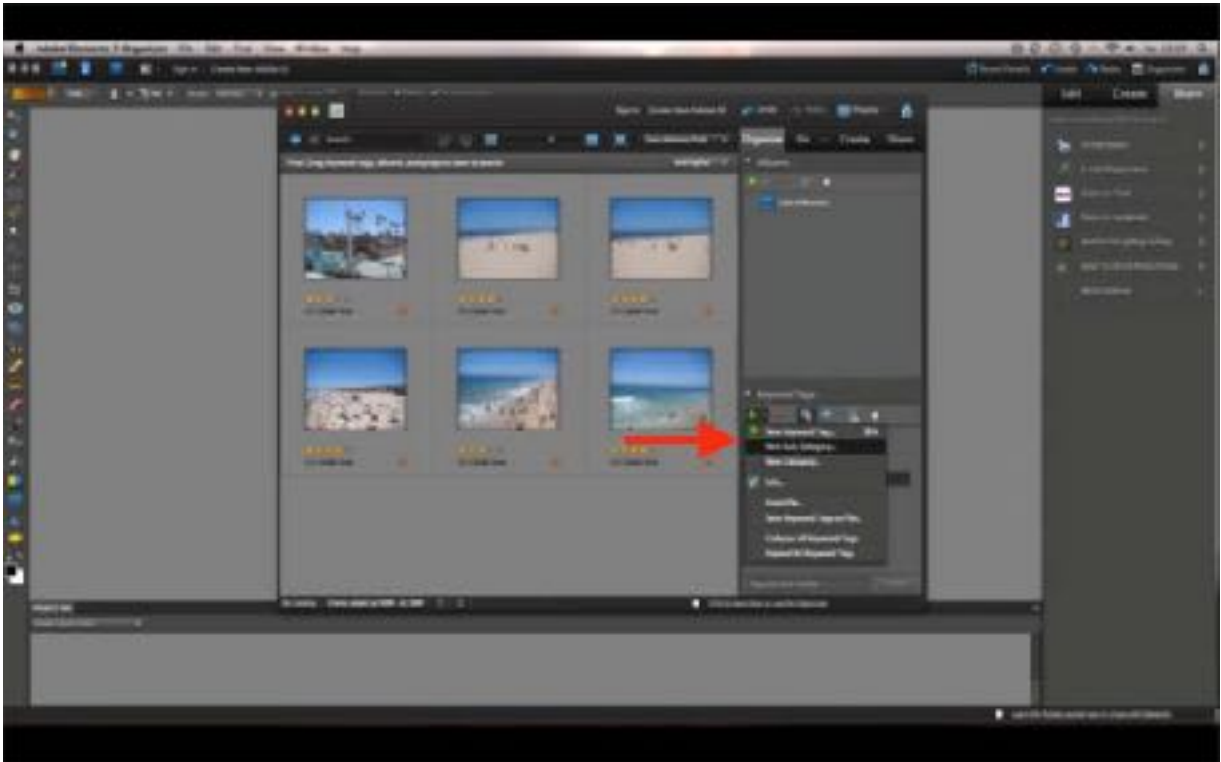

You click on the little stars on top and then the tab right next to it where you get the options to display the photos

The options are: add lower, add higher or only. (the stars you picked)

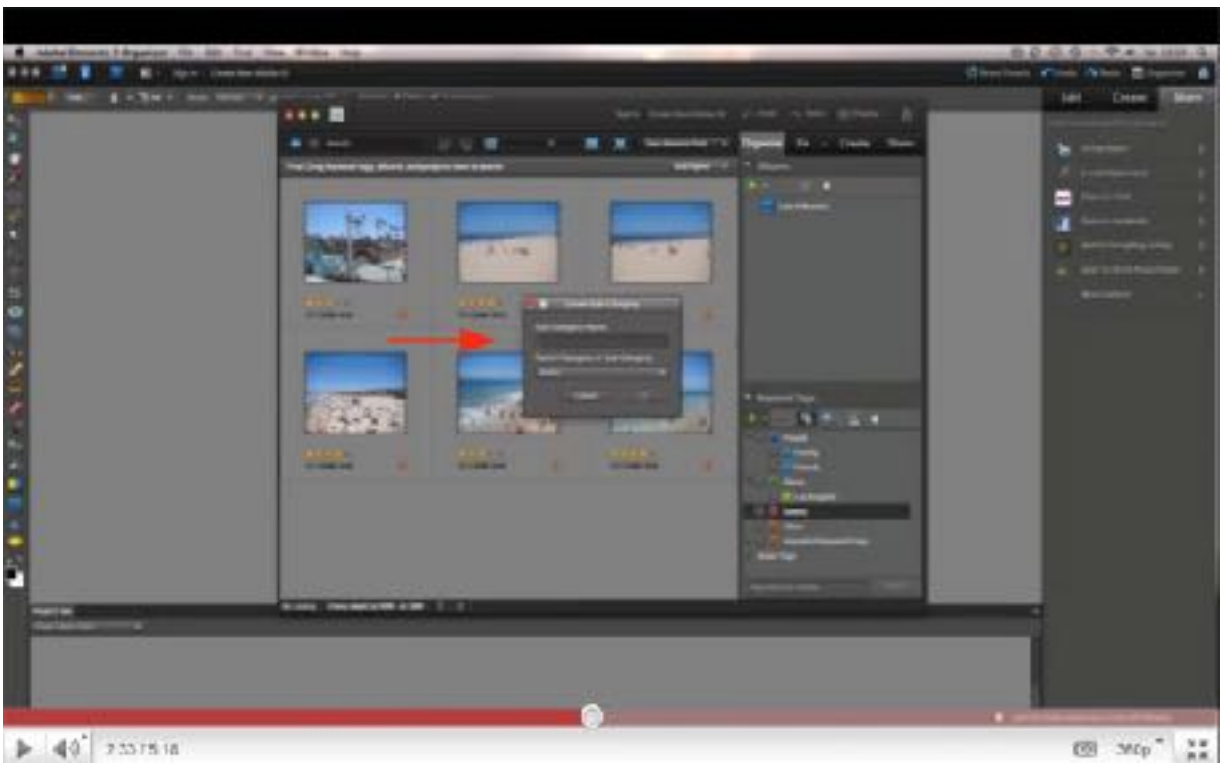

– Next we are going to add keyword tags

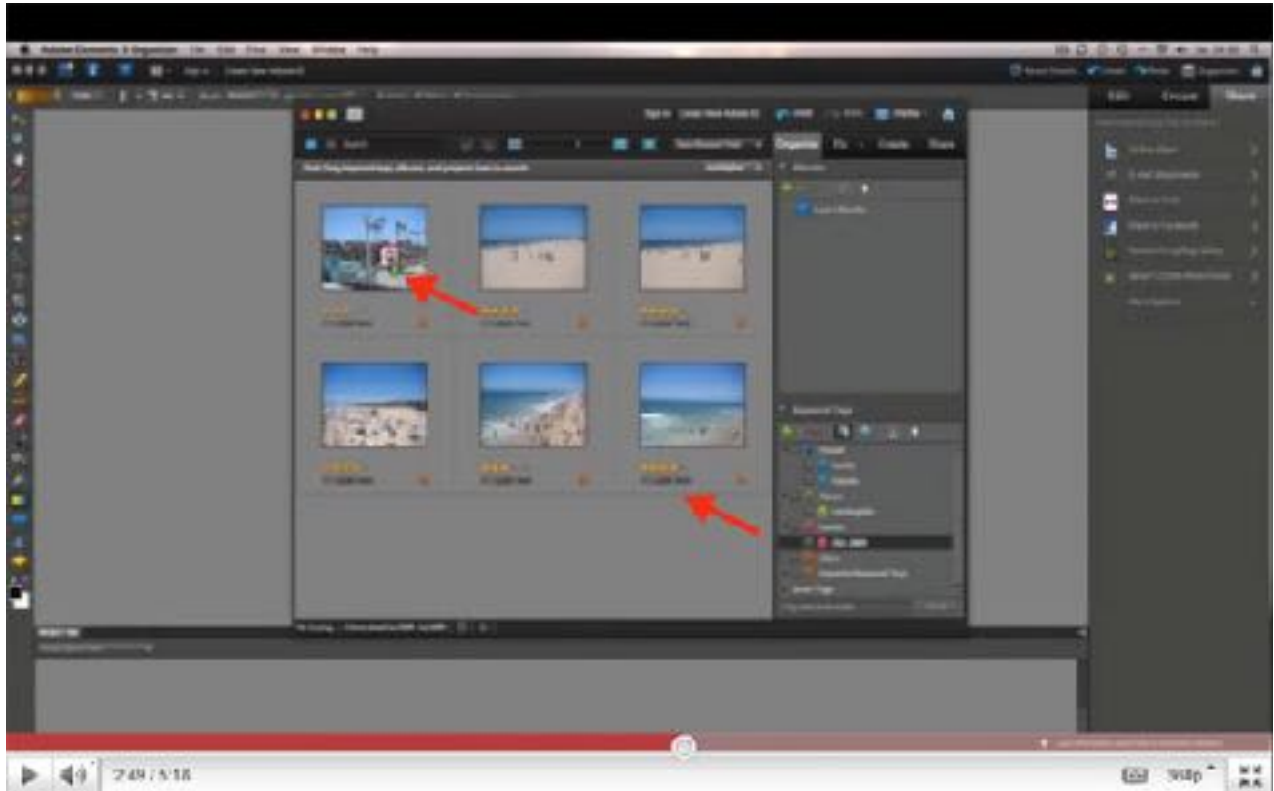

We are now going to add sub categories to our main categories (see pic below)

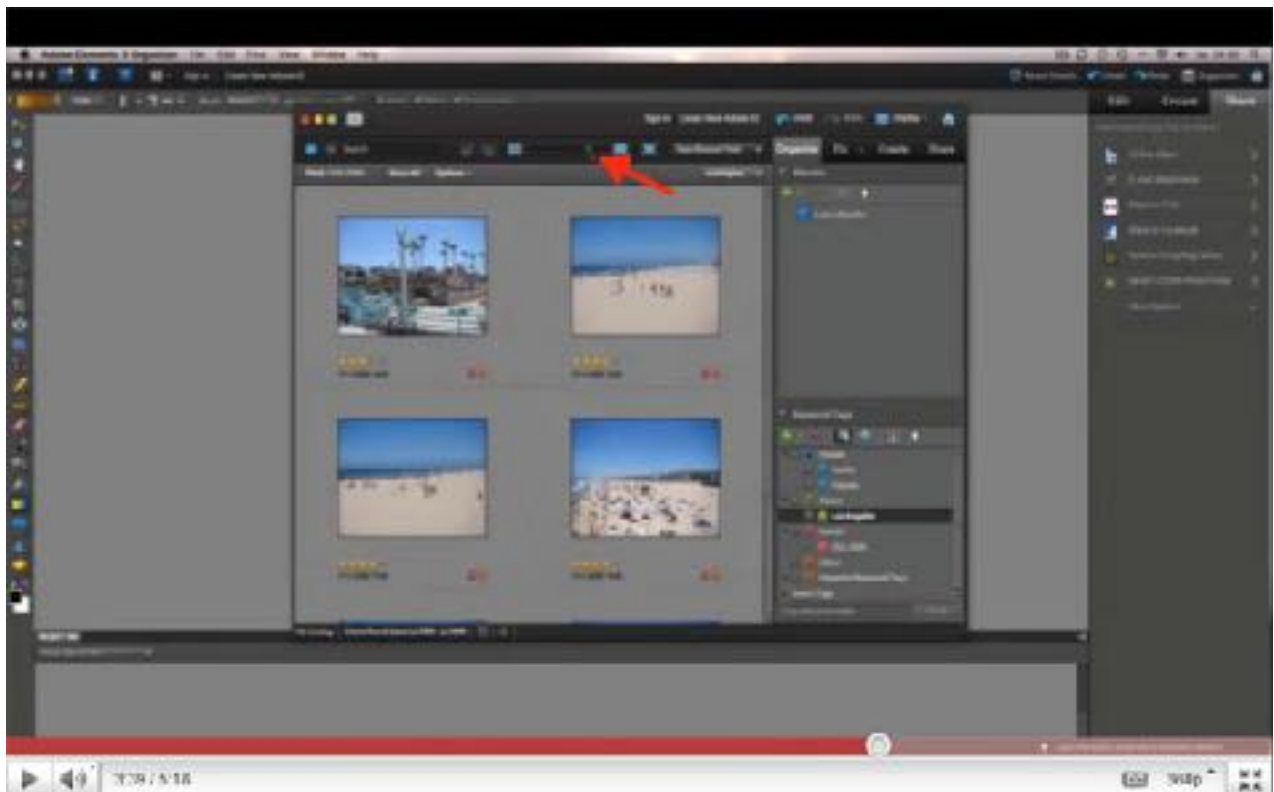

a little box will pop up where you are going to write the name of your sub category.. click OK (see pic below)

Then you can drag the category and/or sub category tag to your photos (see pic below)

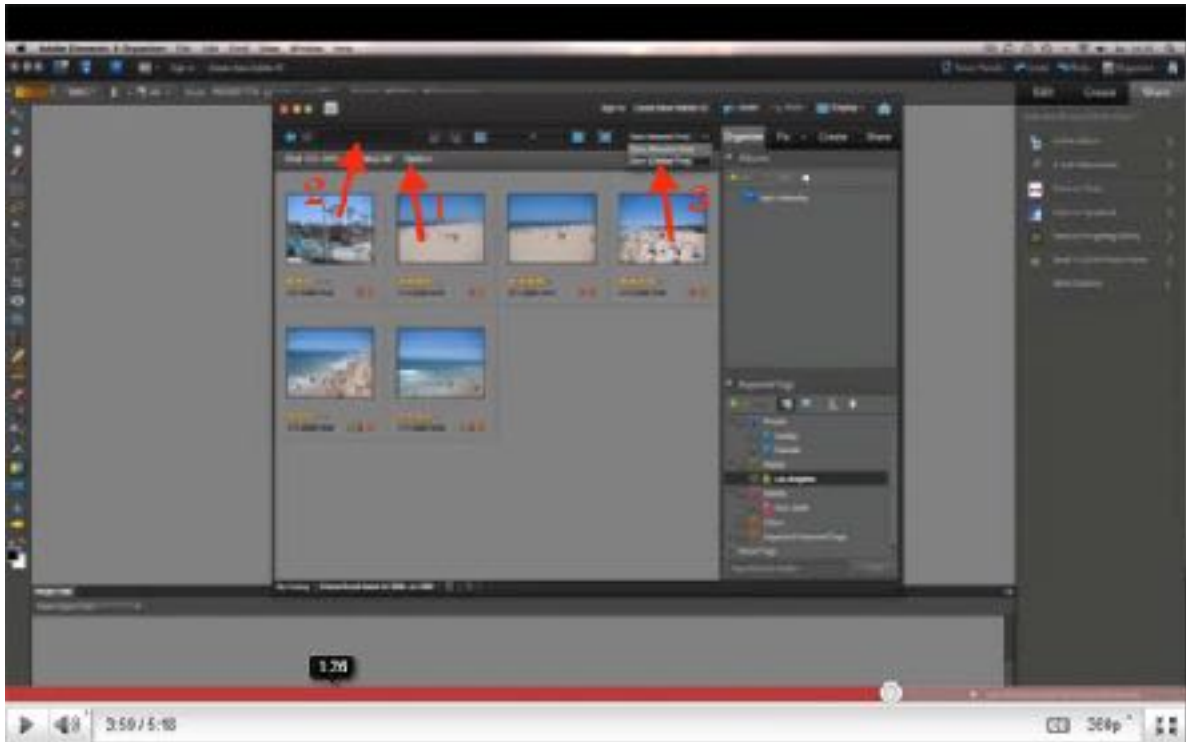

After you have done all that you can simply click on the categories or sub categories and have the photos show up that you want to work with in your Photoshop Elements program. Another very useful function is the slider (see pic below) make your photos show larger or smaller.

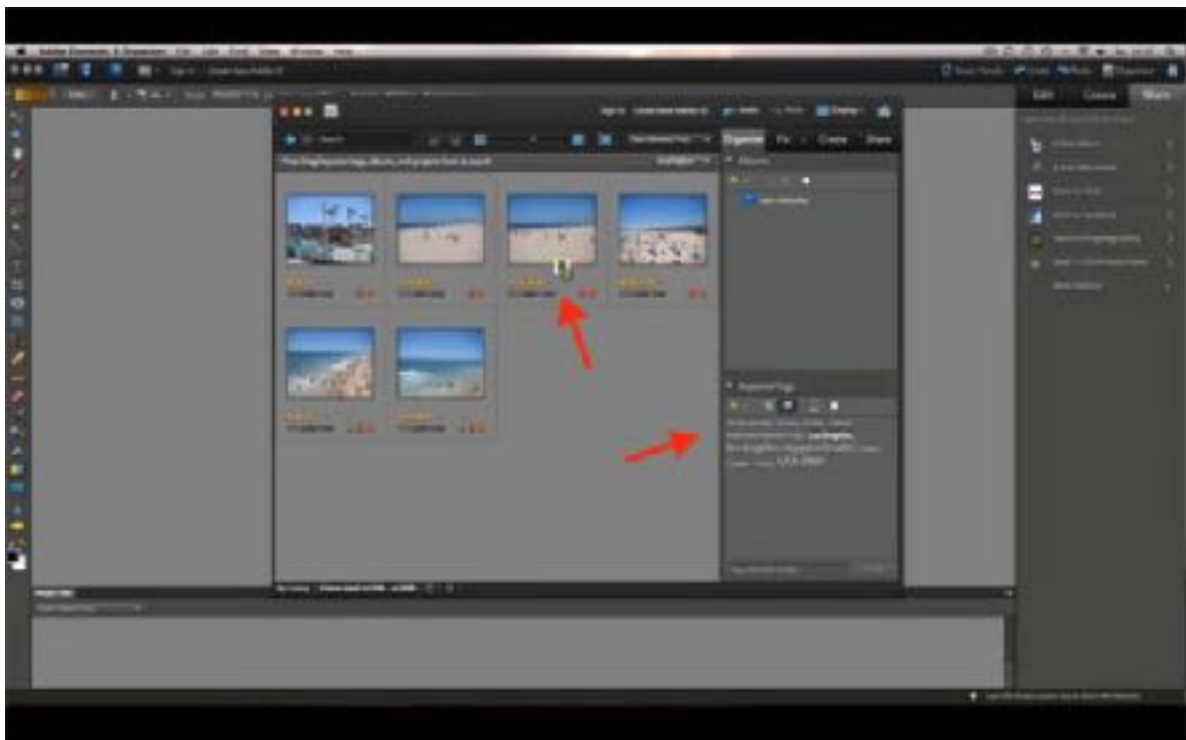

also (see pic below)

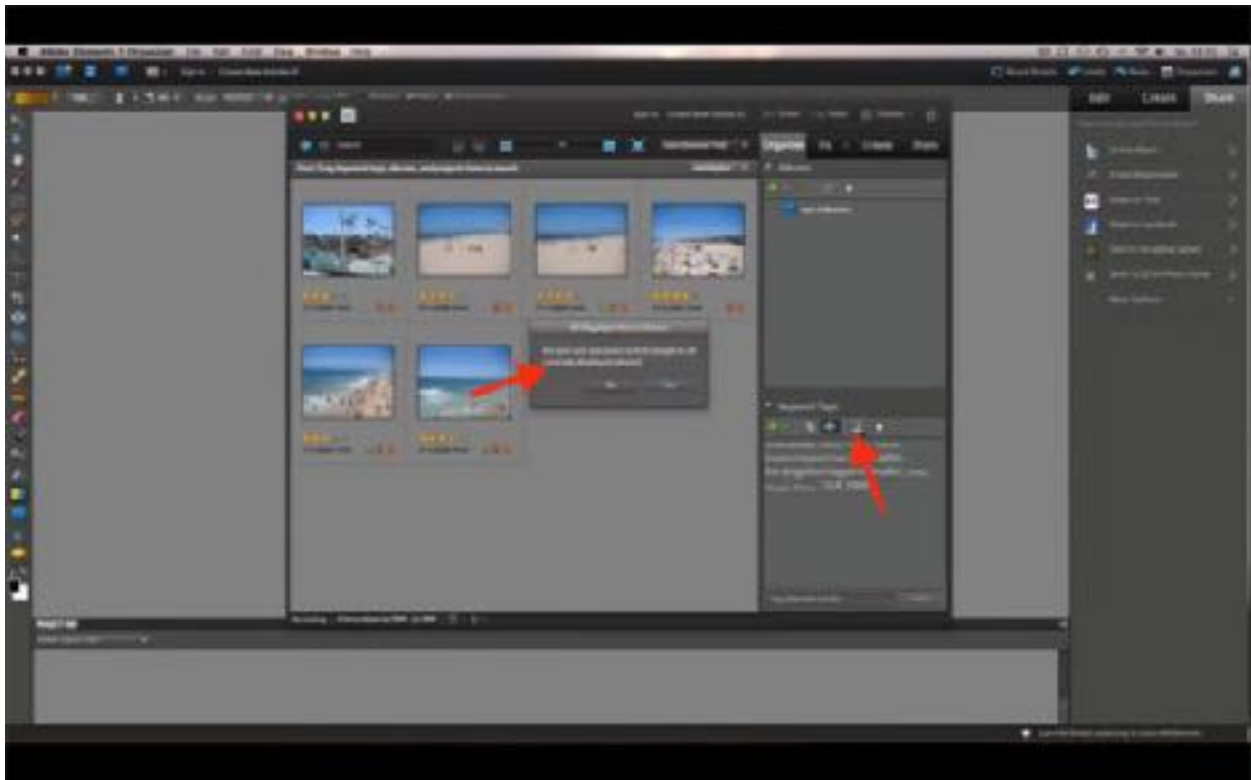

- 1: Show all (you will get all the photo you imported)
- 2: Search (type in name of photo you are looking for)
- 3: By date, old or new

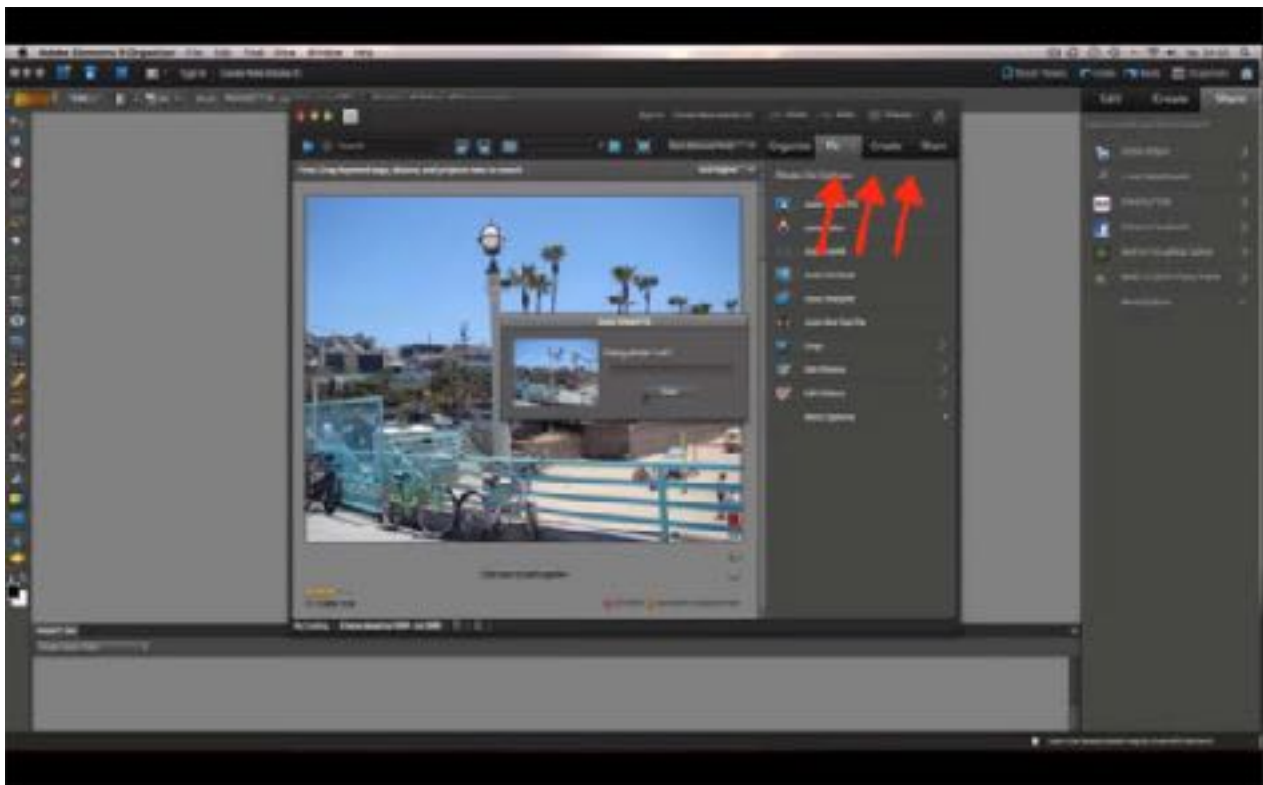

You can also add tags to your photos through the keyword tag display (see pic below), by dragging the words to your photos.

...and then we have also the option of just choosing the ones with people in them (see pic below)

and then we have the File, Create and Share options. (see pic below)

and then we have the File, Create and Share options. (see pic below)
